Rayalaseema University
Kurnool, Andhra Pradesh, INDIA*

To whom it may concern,

I am pleased to write this letter regarding to Dr. Seella Ramanaiah's activities performed at West Virginia University (WVU). Dr. Ramanaiah was hired as a post doctorate for 3 months, June to August 2016, at the Wood Science and Technology Department, School of Natural Resources.

Dr. Ramanaiah was working under my direct supervision and his main activity during his time at WVU was running our Inverse Gas Chromatography (IGC) equipment for surface energy determinations of cellulosic composite materials. He run several experiments performing his work in a very responsible and diligent manner. Now he will be analyzing the data generated and I hope we can finish a manuscript together which will be submitted to a peer reviewed journal before the end of this year.

I hope we can keep communication with Dr. Ramanaiah and seek for future collaboration in areas of common interest.

Sincerely,

Dr. Gloria Oporto
Associate Professor
West Virginia University
