Contents

1. Introduction	418
2. Methods of NP-based drug delivery to skin cancer cells	421
2.1 Passive targeting	421
2.2 Active targeting	422
2.3 Stimuli responsive targeted delivery	422
3. Mechanism of drug release from nanoparticles	428
3.1 Diffusion-controlled release	428
3.2 Solvent-controlled release	428
3.3 Degradation-controlled release	429
3.4 pH-controlled release	429
3.5 Drug-release mechanisms of drug from lipid based nanocarriers	430
3.6 Lipid based nanocarriers	430
3.7 Drug-release mechanisms	431
3.8 Types of nano formulation	434
4. Inorganic nanoparticles	440
4.1 Carbon nanotubes	440
4.2 Quantum dots	444
4.3 Gold nanoparticles (AuNPs)	445
4.4 Magnetic ironoxide nanoparticles (MIONPs)	447
4.5 Mesoporous silica nanoparticles (MSNPs)	448
5. Combination of photodynamic therapy and nanomedicine in vivo and in vitro studies	449
